PATENT COOPERATION TREATY

From the INTERNATIONAL PRELIMINARY EXAMINING

KOREANA PATENT FIRM

DONG-KYONG BUILDING 824-19, YOKSAM-DONG, KANGNAM-KU, 135-080 SEOUL, Republic of Korea

NOTIFICATION OF TRANSMITTAL OF INTERNATIONAL PRELIMINARY **EXAMINATION REPORT**

(PCT Rule 71.1)

Date of mailing (day/month/year) 30 OCTOBER 2004 (30.10.2004)

Applicant's or agent's file reference

F-214-PCT

IMPORTANT NOTIFICATION

International application No.

International filing date (day/month/year)

Priority date (day/months/year)

PCT/KR2002/001245

29 JUNE 2002 (29.06.2002)

Applicant

PARK, SOOYOUNG et al

- 1. The applicant is hereby notified that International Preliminary Examining Authority transmits here with the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the international Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report(but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details in the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

		Claims		<u>NO</u>
	Inventive step (IS)	Claims	1-3	YES
		Claims		NO
	Industrial applicability (IA)	Claims	1-3	
		Claims		No

2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: JP 2000-91077 A D2: JP 2001-123156 A D3: JP 11-17576 A

The present invention relates to a branched a-cyanostilbene fluorescent represented by chemical formula 1, capable of being used in a electroluminescent display, which is an organic material comprising a stilbene moiety and a branch of phenyl at the distal end in powder, solution, or film state, wherein tuning colors such as red, green, and blue is possible according to a stilbene structure, and the luminescent feature becomes higher in a solid state than in liquid state. Claims 1-3 relate to an organic electroluminescent composition containing a-cyanostilbene compound.

D1 relates to an organic electroluminescent element which includes a styryl compound represented by formula 1 in an organic layer of its luminescent region between cathode and anode in order to provide high luminance. D2 relates to a polymeric fluorescent substance which includes a polymeric phosphor comprising one or more kinds of repeating units represented by chemical formulas 1-3 in a luminescent layer between cathode and anode. D3 relates to a polymeric fluorescent substance comprising a charge transport layer adjacent to a luminescent layer including a polystyrene polymeric phosphor represented by chemical formula 1 between cathode and anode.

The present invention is different from D1-D3 in its purpose for providing a polymeric fluorescent compound capable of tuning colors such as red, green, and blue, whereas D1-D3 is to provide a high-efficient organic luminescent element by using a polymeric fluorescent having high luminance.

International aplication No.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

PCT/KR2002/001245

Supplemental Box (To be used when the space in any of the preceding boxes is not sufficient)

Continuation of:

Box V

They are different in the technical feature: the organic luminescent compound of the present invention has a structure containing a biphenyl structure as a cyanostilbene having substituents at both ends; the styrene compound of D1 is an organic luminescent compound comprising 4 phenyl groups with 3 vinyl groups therebetween and two amine groups at both distal ends of phenyl groups; the polystyrene of D2 is a polymer of polystyrene comprising repeating units; and D3 discloses an organic luminescent compound having a phenyl group having octyloxy as a substituent and vinyl groups as a substituent at both ends. In addition, the subject matter of the present invention shows its luminescence feature even in powder, solution, or film state; can be used for high efficient displaying device capable of tuning colors depending on R1 of chemical formula 1; and shows thermostability, which is not disclosed in D1-D3.

Accordingly, it is not considered to be obvious to a person skilled in the art to apply the knowledge of these documents individually or in combination in order to create a -cyanostilbene compounds according to the invention claimed in claims 1-3.

Thus, claims 1-3 are novel and inventive under PCT Article 33(2)-(3).

Claims 1-3 directed to an organic luminescent compound which is useful for manufacturing an organic electroluminescent element showing the luminescent feature in powder, solution, and a film are industrially applicable under PCT Article 33(4).
